Edge-Optimized Server Compute

The 5433N combines 20 physical cores with 40 threads, a 2.30 GHz base frequency, and a 160 W TDP. Its compute profile suits network functions, edge servers, communications infrastructure, and general server workloads.

Single-Socket Deployment

Intel specifies 1S Only scalability for the 5433N. This supports compact edge platforms that need predictable processor, memory, and I/O resources in one socket.

High Turbo Frequency

The processor reaches up to 4.10 GHz Intel Turbo Boost frequency. Combined with 20 cores and 40 threads, this provides a balance of parallel capacity and responsive performance for edge applications.

PCIe 4.0 I/O Expansion

Forty-eight PCIe 4.0 lanes provide direct expansion capacity for Ethernet adapters, storage controllers, accelerators, and other server devices in a single-socket design.

ECC Memory for Edge Platforms

The processor supports up to 4 TB of DDR5-4000 memory across eight channels, with ECC support for server-class reliability. This gives single-socket systems room for virtualized network functions, caches, analytics, and service containers.

vRAN Boost for Network Workloads

Intel vRAN Boost is listed for the processor and supports selected virtualized RAN workloads. Combined with the processor's network-oriented Edge Enhanced positioning, it helps target communications and edge deployments.

AI and Data-Movement Acceleration

Intel AMX and DL Boost support selected AI and inference workloads. One default DSA device supports data movement operations, while AVX-512 instructions and two AVX-512 FMA units support selected analytics and compute workloads.

Security and Virtualization Foundation

The processor includes Intel SGX with Intel SPS, Total Memory Encryption, Boot Guard, Control-Flow Enforcement Technology, AES instructions, VT-x, VT-d, and Extended Page Tables. These capabilities help protect workloads and support virtualized server platforms.
